                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 * NOTE: This record contains 82 individual

* sequencing reads that have not been assembled into
contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
voverlap relationships among clones to be deduced.
However, it should not be assumed that this clone
will be sequenced to completion. In the event that
the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                            Center code: WIBR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             COMMENT
```

```
This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e. phred quality
>=30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone, fosmid clone or direct clone walk sequence.
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to obtain the consensus sequence. The
assembly was confirmed by restriction digest.
This finishing standard has slightly changed from the previous
Human standard. Specifically, standards for regions of low sequence
complexity (such as dinuclectide repeats and small unit tandem
repeats) have been relaxed. These regions are very prevalent in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      If a sequence meets the criteria of the above statement, it needs no comments or tags. If the criteria are not met, such as ambiguous bases, then the region is duly annotated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The BAC Library has been constructed by Pieter de Jong and coworkers (http://www.chori.org) from male C57BL/6J mouse spleen and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at http://www.chori.org
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                             NOTE: This is a 'working draft' sequence. It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Score 18.4; DB 14; Length 143988; Pred. With the exception of oligonucleotide WD1005 (AAF9505), the immunostimulatory oligonucleotides contain at least one unmethylated CpG motif. In preferred embodiments the internucleotide linkage is phosphorodithioate, although phosphodiester and other internucleotide bonds, or mixtures of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New vaccine formulation comprising human immunodeficiency virus (HIV) antigen and immunostimulatory CpG oligonucleotide, useful for preventing and treating HIV infections in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Immunostimulatory oligonucleotide; adjuvant; HIV antigen; HIV infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Immunostimulatory oligonucleotide WD1005 for use in an HIV vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ALIGNMENTS

The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immune response. The present sequence is one such immunostimulatory nucleic acid. The immunostimulatory nucleic acids can be pyrimidine rich (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma, hasmophilus, campylobacter, clostridium, Becherichia coll and/or staphylococcus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, asthma, infectious disease, allergy or immune deliciency. The present sequence can also be used to redirect a full immune response and to activate immune cells. Note: the present sequence may have a phosphorothioste backbone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Vaccine, cytostatic, virucidal, bactericidal, fungicidal, anti-parasitic, immunetimulatory, tumour; viral infection, bacterial infection, fungal infection, parasitic infection, cancer, asthm, infection and an allergy, immune deficiency, phosphorothicate; ss.
linkages are within the scope of the invention. The HIV antigen may be selected from gp160, gp120, Nef, Tat, and Nef or Tat derivatives or fusion proteins. The vaccine is used for the prophylaxis or treatment of HIV infection in a patient. The present sequence represents a specifically claimed immunostimulatory oligonucleotide, WD1005, for use in the vaccine of the invention. This oligonucleotide does not contain a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Vaccinating against tumors, infectious diseases, allergies and asthma using immunostimulatory Py-rich and TG nucleic acids.

dermally or parenterally with an antigen. to stimulate an antibody dependent cellular cytotoxic immune response, to treat non-autoimmune Thi mediated disease and autoimmune disease, to prevent infectious diseases and cancer. The methods are useful for treating and preventing diseases and cancer. The methods are useful for treating and preventing diseases are associated with a Thi immune response, or for creating a Thi environment for treating disorders that are sensitive to a Thi immune response. This mediated disorders include autoimmune diseases (e.g., rheumatoid carthrila, crohn's disease, systemic lupus erythematosus (SEB), arthrilas, crohn's disease, systemic lupus erythematosus (SEB), autoimmune encephalomyelitis, myasthenia gravis, Hashimoto's thyroiditis, Goodpasture's syndrome, pemphigus, Grave's disease, autoimmune haemolytic cansemia, autoimmune hromboticy trisque disease, autoimmune associated infertility, glomerulonephirits, bullous pemphigoid, Sigdren's syndrome, infertility, glomerulonephirits, bullous pemphigoid, Sigdren's syndrome, insulin resistance, and autoimmune disbetes mellitus) and non-autoimmune diseases (e.g., psoriasis, Thi inflammatory disorders, solid organ allografit rejection, symptoms associated with Hepatitis B infection, included the symptoms associated with Hepatitis B infection, included the symptoms associated with Hepatitis B infection, included when the symptoms associated with Hepatitis B infection, included the symptoms associated with Hepatitis B infection, included when the symptoms associated with Hepatitis B infection, included when the symptoms associated with Hepatitis B infection, included when the symptoms are minimally and control or the symptoms associated with the symptoms are minimally and control or the symptoms associated with the symptoms and the symptoms associated with Hepatitis B infection, included the symptoms are symptoms associated with the symptoms and the symptoms are symptoms and symptoms are symptoms and symptoms are symptoms and symptoms are sy present sequence represents a non-CpG oligonucleotide motif used to induce a Th2 immune response as described in the methods of the invention insulin-dependent diabetes mellitus, multiple sclerosis, silent thyroiditis, and unexplained recurrent abortion). The methods are also useful for treating or preventing parasitic infections, infectious diseases, cancer, for stimulating antibody dependent cellular cytotoxic invention relates to methods using a Th2-immunostimulatory nucleic mmune response and for inducing an antigen specific response. ```
The invention relates to inhibiting angiogenesis in a subject, comprising administering at least one antiangiogenic nucleic acid molecule. Also included is a kit comprising a first container housing the antiangiogenic nucleic acids, and instructions for administering them to a subject having a condition characterised by unwanted angiogenesis. The method is useful for inhibiting angiogenesis associated with solid tumour growth, tumour metastasis, precancerous lession, rheumatoid arthritis, psoriasis, diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis, Osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, hypertrophic scars. The present sequence is an antianglogenic nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

Inhibiting angiogenesis in a subject, involves administering at least one

antiangiogenic nucleic acid molecule to the subject.

The invention describes a method of treating non-allergic inflammatory disease comprising administering to a subject having or at risk of developing a non-allergic inflammatory disease an immunostimulatory nucleic acid for prevention or treatment of the disease. The method is useful for treating non-allergic inflammatory diseases, such as psoriasis, eczema, allergic context dermatitis, latex dermatitis or inflammatory bowel disease e.g., ulcerative colitis or Crohn's disease. This sequence represents an immunostimulatory nucleic acid
                                                                                                      Immunostimulatory, antiinflammatory, dermatological, antipsoriatic, antiulcer; gene therapy, vaccine, non-allergic inflammatory disease, psoriasis, eczema, allergic contact dermatitis, latex dermatitis; latex inflammatory bowel disease, ulcerative colitis, crohn's disease; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Treating non-allergic inflammatory diseases, such as psoriasis, ecze allergic contact dermatitis, latex dermatitis or inflammatory bowel disease by administering an immunostimulatory nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ds; allergy; asthma; poly-G nucleic acid; aerosol formulation; hypo-responsive subject; immunostimulatory.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to methods for treating or preventing cancer, involving administering to a subject having or at risk of developing cancer immunostimulatory nucleic acids that induce expression of cell surface antigens and antibodies. The methods are useful for treating or preventing cancer such as basal cell carcinoma, bladder cancer, bone cancer, brain and central nervous system (CNS) cancer, brass cancer, ocsophageal cancer, colon and rectum cancer, connective tissue cancer, ocsophageal cancer, lung cancer, kidney cancer, laryux cancer, leukaemia, liver cancer, lung cancer, kidney cancer, laryux cancer, pancreatic cancer, nyeloma, oral cavity cancer, ovarian cancer, pancreatic cancer, prostate cancer, rabdomyosarcoma, skin cancer, stomach cancer, testicular cancer, and uterine cancer. The present sequence is an immunostimulatory oligonucleotide described in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Treating or preventing cancer, such as basal cell carcinoma, comprises administering immunostimulatory nucleic acids that induce expression of cell surface antigens and antibodies to a subject having or at risk of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

The invention relates to a method of suppressing a symptom of an allergic response in a subject by administering a first and second dose of an immunostimulatory nucleic acid that comprises a nucleotide sequence comprising 5'-cg-3', and where the second dose is administered from 1 day to 8 weeks after the first dose. The methods and compositions of the present invention are useful for the treatment or prevention of asthma and allery, including rhinitis, urticaria and acopic dermatitis, using an immunostimulatory nucleic acid alone or in combination with other medicaments. They can also be used in preventing bacterial and viral infections. This sequence represents an oligonucleotide used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a new compound, targeted to a nucleic acid encoding ROCK 1, that specifically hybridises with the nucleic acid encoding ROCK 1 and inhibits expression of ROCK 1. The oligonucleotide compound is useful for preparing a composition for treating hyperproliferative disorder, e.g. cancer. The present sequence represents human ROCK 1 DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New oligonucleotide compound that inhibits expression of ROCK 1, usef for preparing a composition for treating hyperproliferative disorder,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                        The invention relates to a method of treating or preventing allergy or asthma which comprises administering to a subject a poly-G nucleic acid in an aerosol formulation. The methods and compositions of the present invention are useful for diagnosing and/or treating asthma and allergy especially in a hypo-responsive subject. The present sequence represents an immunostimulatory nucleic acid of the invention.
                                                                                                                                                                                                            Treating and/or preventing allergy or asthma using an immunostimulatory nucleic acid alone or in combination with an asthma/allergy medicament.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

Other;

The invention relates a recombinant DNA construct comprising a polypucleotide having any of 5544 mucleotide sequences (CDNAs SEQ ID NO: 1-5545-11088). The CDNAs and proteins are from corn, soybean, Arabidopsis, wheat and rape but the specification does not indicate which sequences is derived from which organism. Also included is a method of producing a plant having an improved property, comprising transforming a plant with a recombinant DNA construct comprising a promoter region to plant with a recombinant DNA construct comprising a promoter region collapsety is selected from improving plant coll dolarance, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for improving plant drought tolerance, for improving plant tolerance to herbicides, for increasing the rate of plant growth regulators, for improving plant tolerance to herbicides, for increasing the rate of complogous recombination in plants, for lignin production, for improving plant tolerance to herbicides, for improving plant tolerance to extreme osmotic conditions, for improving plant tolerance to extreme osmotic conditions, for improving plant tolerance to extreme osmotic conditions, for improving plant under an extreme osmotic condition. For improving plant clarance to pathydrate, nitrogen or phosphorus use and/or content, for modification of carbohydrate, nitrogen or phosphorus use and/or content, for the polymucleotide may development under at least one stress condition. The polymucleotide may development under at least one stress condition. The polymucleotide may development under at least one stress condition. The polymucleotide may development under at least one stress condition. The polymucleotide in particular for producing transgenic plant produce to extreme osmotic and increased yield, improved plant collerance to extreme osmotic and drought conditions, New recombinant DNA constructs useful in the field of biochemistry and genetics, and in particular for producing transgenic plants with improved Plant; ss; gene; transgenic; cold tolerance; growth rate; drought tolerance; disease resistance; galactomannan production; plant growth regulator; heat tolerance; herbicide tolerance; lignin production; extreme osmocitc condition tolerance; pathogens resistance; pest resistance; yield improvement; seed oil yield; Claim 1; SEQ ID NO 1939; 14pp; English. 184253 TCCATGAGCTTCCTGATCTT 184272 ADT16613 standard; cDNA; 2616 BP. 18-DEC-2003; 2003US-00739930. 28-APR-2003; 2003US-00424599. 28-APR-2003; 2003US-00425115. genetics, and in particular biological characteristics. 13-JAN-2005 (first entry) Plant cDNA, Seg ID 1939.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; Cytochrome P450; Subfamily XXVIIA; single nucleotide polymorphism; Steroid 2.7-Hydroxylase; Cerebrotendinous Xanthomatosis Polypeptide 1; CYP27A1; SNP; drug screening; cerebrotendinous xanthomatosis; chromosome 2q33-qter; gene; ss.
tolerance to plant pests or pathogens. They can also be used in physical arrays of molecules, plant breeding markers, computer-based storage and analysis systems. The present sequence is one of the 5544 plant cDNA sequences of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.uspto.gov/sequence.html?DocID=20040216190.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /-candard_name= "Single Nucleotide Polymorphism (SNP)"

The present invention relates to a new human Cytochrome P450, Subfamily XXVIIA, (Steroid 27-Hydroxylase, Cerebrotendinous Xanthomatosis)

CC XXVIIA, (Steroid 27-Hydroxylase, Cerebrotendinous Xanthomatosis)

CC invention comprises a sequence which is a polymochic variant for a circuit of a reference sequence for the CYP27A1 gene or its fragment, or a polymorphic variant of a reference sequence for a CYP27A1 cDNA or its fragment. The invention is useful for screening for drugs by contacting the CYP27A1 cplymorphic variant with a candidate agent and assaying for binding activity. The invention is also useful in studying the expression and correction of CYP27A1, and in expressing CYP27A1 protein for use in screening for candidate drugs to treat diseases related to CYP27A1 sogenes in vivo screening and testing of drugs targeted against compounds for in vivo screening and testing of drugs targeted against CYP27A1 protein, and for testing the efficacy of therapeutic agents and compounds for diseases associated with CYP27A1 activity, e.g. cerebrotening and testing of the rapectic agents and compounds for diseases associated with CYP27A1 activity, e.g. cerebrotening the effect of the variation on the biological creating CYP27A1 for studying the effect of the variation on the biological creating CYP27A1 as well as on the binding affinity of candidate drugs cartivity of CYP27A1 as well as on the binding affinity of candidate drugs cartivity of CYP27A1 as well as every especial the human CYP27A1 gene content of the invention of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Unmethylated CpG dinucleotide; immune response; bacterial meningitis; natural killer cell activation; NK cell; Th2 response; neonatal sepsis; pulmonary disorder; asthma; environmentally induced airway disease; bacterial infection; endotoxaemia; therapy; cystic fibrosis;
                                                                                                                                                                                                                                          Novel isolated human Cytochrome P450, Subfamily XXVIIA, Steroid 27-Hydroxylase, Cerebrotendinous Xanthomatosis 1 gene, useful for therapeutic purposes, and for studying expression and function of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 12718 BP; 3189 A; 2997 C; 3093 G; 3225 T; 0 U; 214 Other;

AAV27641-751 represent immunostimulatory oligodeoxyribonucleotides (ODNs) of the invention. The ODNs contain at least one unmethylated CpG dinucleotide, and have the formula: 5' NIXIGXZNZ 3', where at least one nucleotide separates consecutive CpGs, XI is adenine, guanine, or thymine, X2 is cytosine or thymine, N is any nucleotide and NI+NZ is 0-26 bases with the provision that NI and NZ does not contain a CGG tetramer or more than one CGG or CGG trimer OR 5' NXIXZGXXXXX 3', where at least one nucleotide separates consecutive CpGs, XI and X2 are selected from CpGr CpG, CpA, ApT and ApA, X3and X4 are selected from TpT or CpT, N is any nucleotide and NI+NZ is 0-26 bases with the provision that NI and NZ does not contain a CGG tetramer or more than one CGG or CGG trimer. The
                                                                                                                                                                                                                                             New immunostimulatory nucleic acid molecules - which contain at least one unmethylated CpG dinncleotide, used for treating e.g. tumours, infections or autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               oDNs activate lymphocytes in a subject and redirect a subject's immune response from a Th2 to a Th1 (e.g. by inducing monocytic cells and other cells to produce Th1 cytokines, including IL-12, IFN-gamma and GM-CSF). The ODNs can be used to treat or prevent an asthmatic disorder, autoimmune diseases, in desensitisation therapy, as an artificial adjuvant during antibody generation in a mammal such as a mouse or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Immunostimulatory; oligodeoxyribonucleotide; ODN;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents an unmethylated CpG dinuclectide, and can be used in the method of the invention. The method is for treating a subject having, or at risk of having an acute decrement in air flow, comprising caministering a nucleic acid sequence containing at least one administering a nucleic acid sequence containing at least one dainistering a nucleic acid sequence containing at least one containing at least one mucleic acid sequence containing at least one dinucleotide affect an immune response in a subject by activating natural caller calls (NK) or redirecting a subject by activating natural to a Thi response by inducing monocytic and other calls to produce Thi cytokines. They can be used to treat pulmonary disorders having an immunologic component, such as sethma or environmentally induced airway disease. They can also be used to treat diseases associated with Grampositive bacterial infections or endotoxaemia including bacterial and liver cirrhosis, Gram-negative pheumonia, Gram-negative abdominal abscess, haemorrhagic shock, disseminated intravascular coagulation, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Immunostimulatory; oligodeoxyribonucleotide; ODN;

```
AAV27641-751 represent immunostimulatory oligodeoxyribonucleotides (ODNs) of the invention. The ODNs contain at least one unmethylated CpG dinucleotide, and have the formula: 5' N1X1CGXN2'3', where at least one uncleotide separates consecutive CpGs, X1 is adenine, guanine, or thymine, X2 is cytosine or thymine, N is any nucleotide and N1+N2 is 0-26 bases with the provision that N1 and N2 does not contain a CCGG tetramer or or more than one CCG or CGG trimer OR's NX1X2CGX3X4N 3', where at least one nucleotide separates consecutive CpGs, X1 and X2 are selected from GpT, GpG, GpA, ApT and ApA, X3and X4 are selected from TpT or CpT, N is con nucleotide and N1+N2 is 0-26 bases with the provision that N1 and N2 does not contain a CCGC tetramer or more than one CCG or CGG trimer. The CDNs activate lymphocytes in a subject and redirect a subject's immune response from a Th2 to a Th1 (e.g. by inducing monocytic cells and other CCC cells to produce Th1 cytokines, including IL-15. IFV-gamma and GM-CSF). The ODNs can be used to treat or prevent an asthmatic diseases, in desensitisation therapy, as an artificial contain a mammal such as a mouse or a
                                                                                                    New immunostimulatory nucleic acid molecules - which contain at least one unmethylated CpG dinucleotide, used for treating e.g. tumours, infections or autoimmune disease.
                                                                                                                                                                                                     Disclosure; Page 11; 109pp; English.

Site_1: ECORI; Site_2: Xho1; Plants were grown in the
field at University of California, Riverside Agricultural
Operations since 1983. The scion was Washington Navel
Operations since 1983. The scion was Washington Navel
orange and the rootstock Carizzo Citrange. Tissue from
mature fruit was harvested at mid-day in January 2002
during a cold spell, when pre-dawn temperatures were
approximately -2 to 2 degree C. Approximately 2 cm median
several fruits, then wrapped in aluminum foil and frozen
guickly in dry ice. Total RNA was extracted using a phenol
extraction procedure described in Jupannaese Soc. Hort.
Sci. (1996) 64:809-814. Poly(Ah) RNA was purified, and DNA clones
were in vivo excised to give a population of pBluescript
SK(-) phagemids. All steps to this point were performed in
the TJ Close lab at the University of California,
Riverside (Fenton). Phagemids were plated, plasmid DNA
purified, cDNA clones archived, and DNA sequences
determined bi-directionally using an AB13530 at the
Arizona Genomics Institute, University of Arizona
(Collura, Peuerbacher, Kim, Kudmra, Wing, Yul).
Chromatogram files were transmitted to UC Riverside
the HarvEST pipeline (http://harvest.ucr.edu) to remove

/ clone lib="Wouse 10kb plasmid UUGCIM library"
/ note="Vector: PWD421v; Purified genomic DNA from M.
musculus G57BL/6J (male) was obtained from the Jackson
Laboratory Mouse DNA Resources (documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end repaired with T4 DNA polymerase and T4
polynucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis vector DNA was prepared from a derivative
of pWDAQ (gil #4732114 gb) AR129072.1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coli XL10-Gold (Stratagene) cells
and selected for ampicillin resistance."

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;

FILE REPERENCE: CLOO1307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-00-08

NUMBER OF SEQ ID NOS: 207012

SOFFWARE: FRESEER OF Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

Fatent No. 623916

GENERAL INFORMATION:
APPLICANT: KILD
TITLE OF INVENTION: IMMUNOSTIMULATORY NUCLEIC ACID MOLECULES
NUMBER OF SEQUENCES: 111
CORRESPONDENCE ADDRESS: 120
ADDRESSEE: Fish & Richardson P.C.
STREET: 4225 Executive Square, Suite 1400
CITY: La Jolla
STATE: CA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SOFTWARE: ASISTEM FC-DOS/MS-DOS

Application US/08960774

Patent No. 623916

GENERAL INFORMATION:
APPLICANT: Krieg et al.,
TITLE OF INVENTION: IMMUNOSTIMULATORY NUCLEIC ACID MOLECULES
NUMBER OF SEQUENCES: 111
CORRESPONDENCES: 128 K Richardson P.C.
STREET: 4225 Executive Square, Suite 1400
CITY: La Jolla
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS

Patent No. 6551795

GENERAL INFORMATION:

PAPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPRESENTE: 1099-02-18

CURRENT APPLICATION NUMBER: US 60/074,788

PRIOR PILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 6243

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence Sequence
